

The Beauty Shop Huddersfield

The Beauty Shop in Huddersfield was expanding by taking over the adjacent premises and at the same time, extending their facilities within a new extension to the rear of the building.

The owners wanted an attractive, hygienic, easily cleaned and durable floor finish throughout all of the different areas of the business, so they contacted Remmers for advice.

The expansion of the treatment facilities also meant that the new flooring had to be applied on three different substrates - a new concrete screed, a new marine ply mezzanine area and over existing worn quarry tiles in the premises being taken over next door. The marine ply mezzanine also had to be fully waterproofed.

Remmers introduced the specialist flooring contractors,

IRL Group Limited of Loughborough and by selection of the appropriate Remmers priming products, all of the different surfaces were quickly prepared, primed and sealed.

They were all then ready to accept the Remmers Granoflake Flooring System. This has been applied at the same thickness, but in two different complementary colour designs throughout the salon.

Additionally on the new mezzanine area, Remmers recommended and supplied a flexible grade of the resin. This was to accommodate the additional movement and vibration that can occur in these areas whilst maintaining the waterproof seal within the decorative finish.

The Beauty Shop was then quickly able to re-open for

business with extended facilities for their increasing number of clients. All of the surfaces are now attractive, hygienic and extremely easy to clean, just as the owners required.
