

REFERENCE

Schleißheim Castle, Munich

Construction measure

- Waterproofing buildings – subsequent with ground contact
- Facade restoration / render

Type of object

- Castles / forts
- Schools / universities / museums

Brief description

The splendid palace grounds are deemed the Versailles of Bavaria. The complex consists of the old palace built under the reign of Wilhelm V. as a stately home and newer buildings commissioned by Prince Elector Max Emanuel in 1693 after his victory over the Turks. The old palace was nearly completely destroyed during World War II and parts of it only reconstructed in 1972. Today it harbours a branch of the Bavarian National Museum.

Product systems used / Size

Waterproofing buildings –subsequent with ground contact

Building waterproofing: Kiesol System

Facade restoration / render

Renewal of render: Restoration Render System
