

REFERENCE

Chemnitz Sewage Treatment Works

Application Field

- Waterproofing buildings –special areas

Structure Type

- Clarification / bio-gas plants, sewage treatment

Brief Description

Re-profiling to reinforced concrete measuring flume of sewage treatment works.

Main Problem and Requirements

The concrete had been heavily scoured by fast flowing part treated water containing minerals (abrasion) and sewage (chemical attack).

Previous resin coatings had only lasted for a few months.

A durable solution was sought to offer permanent protection.

Client

Chemnitz Public Utilities, Germany

Completion

2009
