Volkswagen Hall in Braunschweig, Germany

Construction measures

- Floor coating – decorative systems

Type of object

- Stadiums / arenas / sport facilities

Brief description

The Volkswagen Hall in Braunschweig has the capacity for all events of larger dimensions: sport events, parties, mega concerts, congresses or large-scale television productions and live shows. In 2006 the hall was to be made larger, more beautiful and better. Eight million Euros in total were invested in the alterations; around 2,000 square metres additional space were added to the hall through an addition in front of the main entrance.

Problem to be solved

During the course of extension and modernisation, the floor coating was also to be renewed because a lot of cracks had formed and there were heavy signs of wear. A new coating was applied to 5,000 m² in the promenade area (the corridor surrounding the tribune on the ground floor), the foyer and the arena.

Planner

Jürgen Friedemann

Product systems used / size

Floor coating

Primer: Epoxy ST 100

Base layer: PUR Inducolor, 2-component, tough-elastic

Sealant: PUR ColorTop m, single component, matt, pigmented

Executing company

WIR GmbH, Meine

Completion

09/2006
