

B&Q DIY Stores Nationwide

FeRFA

The Resin Flooring Association

'Best Application 2005'

Remmers completion of more than one million square metres of flooring for B&Q has been voted 'Best Application 2005' by FeRFA (the Resin Flooring Association).

The 'super fast' curing Remmers epoxy floor systems have been applied in many stores throughout the UK, by specialist flooring contractor Datum Industrial Flooring Limited. These have predominantly been completed by working between the stores' closing time at 8pm until 2am the following morning. Due to the super fast curing Remmers epoxy resin formulations, this has allowed the stores to re-open for normal business and traffic at 8am the next morning.

Overall the works that have been completed in each store have generally been between 1,000 and 2,500 square metres during

each visit. This has included flooring works in both new stores and to upgrade and refurbish existing stores. The advanced Remmers PH Flooring system was developed specifically for this purpose and it can be applied on many different substrates. It can even be applied successfully over existing thermoplastic tiles, provided they are soundly bonded to the substrate.

Remmers accelerated epoxy resin flooring formulations are solvent free, extremely low odour, self smoothing and extremely fast curing – with sufficient mechanical strengths achieved for foot traffic after only THREE hours.

The system is also available in a wide range of colours and produces a dense hard wearing, waterproof surface which is easily cleaned.

A tremendous advantage for Remmers contractors and their important clients, such as B&Q.
