

# TVR Car Showrooms Chiswick, London

When TVR decided to refurbish their prestige car showroom at Chiswick in London, they demanded a high tech floor to reflect their own high tech image. This also had to incorporate their company logo and provide a highly decorative, yet hard wearing, durable, watertight and easily cleaned surface. Obviously, as this is still a working garage, despite the high tech and luxurious interior, the floor also had to be fully resistant to petrol, engine oils and hydraulic fluids etc.

They consulted their experienced flooring specialists, Loughton Contracts plc and they suggested that Remmers could provide the perfect solution. A high tech floor finish with an image to match that of TVR.

As the building was being refurbished, the new flooring system had to be able to

be applied on different substrates including concrete, old quarry tiles and new cementitious screed.

The solution was to mechanically prepare the concrete, screed and the tiles, then apply the correct Remmers primer followed by Remmers Stone Carpet system. This is based on Remmers Construction Resin which is used to bind together millions of tiny natural or coloured pebbles. It is applied as a nominal 5mm screed, laid 'wet on wet', onto the first layer of the resin and then the surface is trowel or float finished to level.

With the easy to use Remmers floor laying materials, Loughton Contracts were also able to design and incorporate the famous TVR logo just as the client had wished. An attractive high tech floor to display their attractive high tech cars.

With Remmers Stone Carpet System the colour and design possibilities are almost limitless, with the different sizes, colours and mixtures of pebbles available.

## Project Details

**Application:**  
Commercial Flooring

**Market:**  
Retail - Automotive

**Client:**  
TVR

**Contractor:**  
Loughton Contracts Plc
