No

Description

La Seine Musicale is a performing arts centre situated south-west of Paris, on the island of Ile Seguin on the Seine river. It has a total surface area of 36,500 m². The building's architecture was designed to make it look like an egg lying on its side. The egg-shaped, glass-clad façade at the heart of the construction is encircled by a solar sail that moves with the sun. The centre took three years to build and was opened on 21 April 2017 with a concert starring Bob Dylan. Its island home is named after Armand Seguin and is the former site of a large car factory, which was demolished back in 2005. The great hall has a capacity of 6,000, while the smaller concert hall for classical music can hold 1,150 attendees.

Problem

The eye-catching honeycomb structure of the walls was assembled from pieces of softwood. The wood used needed to live up to its full aesthetic potential, as well as being provided with long-lasting protection.

Product systems / sizes used

> Induline I-900 IT

Art. No. 3781

> Induline S-910

Art. No. 3777

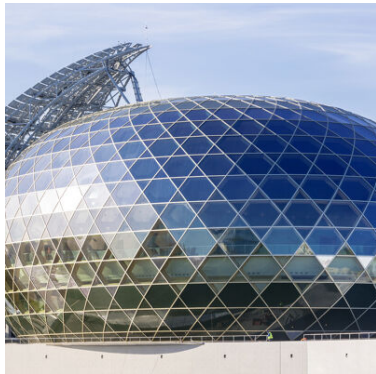

> Long Life Stain UV

Art. No. 2234
