- **Object address**
  , 4 Dublin
- **Date / Completion**
  2010
- **Contractor**
  Aviva Stadium
- **Viewing possible?**
  No

Description

Aviva Stadium is a new stadium built in south Dublin, Ireland in 2010. It is owned by the Football Association of Ireland, the Irish Rugby Football Union and the Irish Government. Previously known as Lansdowne Road Stadium, it is built on the historic site, surrounded by residences, on Lansdowne Road in Dublin's suburbs. It replaced the world's oldest international rugby stadium, built in 1872.

Problem

As part of the new Aviva stadium, protection to concrete elements was required. Remmers Funcosil OFS was chosen as an environmentally correct impregnation to stair cores. Funcosil OFS is a flurosilicate hydrophobic impregnation for the protection of concrete.

Product systems / sizes used

› Funcosil OFS

Art. No. 0617
