Description

BASF Cork manufactures specialty chemicals for the mining industry. As part of an audit, the main water collection tank required to be waterproofed.

Problem

The joints in the concrete sections are subject to continuous movement and so a waterproof and crack bridging system was required. Over 100m of Remmers Flexible bandage B200 was fixed using Epoxy MT 100. The system was over coated in part with Remmers MB 2K.

Product systems / sizes used

› **Epoxy MT 100**
Art. No. 0936

› **MB 2K**
Art. No. 3014
